

## Single and Double Sided Foam Tapes

Information and  
Sample Swatch

**tremco illbruck is recognised across Europe as a leader in sealing, bonding and fire protection solutions for the built environment.**

**Our detailed understanding of our customers, their markets and the demands of the industries in which they operate, enables us to offer bespoke product and service packages for the complete building envelope.**

### **Global Know-how, Local Expertise**

State-of-the-art manufacturing facilities and sales teams operating globally, give our customers direct access to our full range of technological experience and innovative solutions specifically tailored to their needs, wherever they operate.

### **Innovation for Tomorrow**

Market leaders thrive on innovation and tremco illbruck is no exception. Innovation is the unifying thread running through the company's history and its ethos.

Today, more than ever before, the key challenge is to incorporate the latest research into new products that exceed our customers' expectations by developing new system solutions and flexible, accessible services that make construction easier, safer and better.

### **Commitment to Quality**

The tapes production unit in Colchester is one of the tremco illbruck manufacturing centres of excellence. The factory specialises in the manufacturing of a wide variety of single and double sided foam tapes utilising pressure sensitive adhesives. This brochure describes the standard products available and highlights the components of each product, the applications it can be used for and the tapes primary function.

These tapes are used in many industries: automotive manufacture, construction, engineering and a wide variety of specialist applications. Our manufacturing site has a large range of conversion facilities to manufacture every type of adhesive format including rolls, spools, die cuts, and sheets. We are a customer focussed business able to offer off the shelf products in a timely fashion and also tailor made products to meet customer's requirements in more exacting or specific applications.
